                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     repeat_region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Clone requests: cloneréquest@sanger.ac.uk

On Jul 28, 1997 this sequence version replaced gi:2094794.

IMPORTNANT: This sequence is the entire insert of clone 941F9. This
sequence was generated from part of bacterial clone contigs of
human chromosome 22, constructed by the Sanger Centre chromosome 22
mapping group. Further information can be found at
http://www.sanger.ac.uk/HGP/Chr22/
This sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The true left end of clone 941F9 is at 1 in this sequence. The true left end of clone N38E2 is at 9038.

The true right end of clone N38E2 is at 54042.

The true left end of clone 398C2 is at 87881.

The true right end of clone 941F9 is at 127583.

941F9 is from the human BAC library described in U-J. Kim et al. (1996) Genomics 34, 213-218.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Eukaryota; Metazoa; Chordata; Vertebrata; Mammalia; Primates; Catarrhini; Hominidae; Homo.

```

```
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence is the entire insert of clone 860P4. This sequence has been finished according to sequence map criteria as follows. Attempt 1s made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the sequence is ambiguous, there is an annotation using the 'unsure'
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      http://www.sanger.ac.uk/HGP/Chr20
860P4 is from the library RPCI5 constructed at the Roswell Park
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence was generated from part of bacterial clone contigs human chromosome 20, constructed by the Sanger Centre Chromosome Mapping Group. Sc Claim 5; Page 25-27; 42pp; English.

A CDNA library was established from rat skeletal myoblast cell line L6. DNA fragments of approx. 400 bp were recovered and subjected to cloning. 20 plasmids were sequenced. Sequence data of cDNA fragments were constructed to the linkage sequences with the DNA programme DNASIS. The basic sequence protrayed in 090972 was hence constructed. From sequence data of the whole cDNA length, the ORF was determined. The AA sequence was further translated and the sequence thus established is illustrated in R75843. One of the frames possesses the 2993-bp ORF, that was approximated to 3000 bp of the whole ORF length of the Eck family.

primer P6(4) PTK-specific cDNA was synthesised.
primer B6(4) and N5. A 2097 by
amplified using primers P6(4) and R5. A 2097 by
obtained. Primers E3, P12 and E6 were the
c-terminal of the HEKZ receptor gene.
Sequence 3751 BP; 739 A; 1150 C; 112:
3433
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DE4233782-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is a modulator of hTRT, by detecting the change in hTRT recombinant CC protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein CC preparation of hTRT with a telomerase NNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the cc sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT caspession; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding C ageing. A protein preparation of hTRT and the polynucleotide encoding the effect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting the continuous that are associated with high telomerase activity a protein preparation of hTRT can also be used in the name of medicaments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Ma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
            Disclosure; Fig 20; 387pp; English.

The present sequence encodes a human telomerase reverse transcriptase (hTRT) variant from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein of preparation of hTRT with a telomerase by contacting a protein of preparation of hTRT with a telomerase NNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) concreasing the proliferation of a vertebrate cell by increase in cell vertebrate cell proliferation to create a medicament that inhibits agent has a protein preparation of hTRT and the polynucleotide encoding the prosence of in the sample; and the proliferation of a protein that inhibits are the manufacture of hTRT and the polynucleotide encoding the presence of hTRT in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample that inhibits are the manufacture of manufacture in the sample in the sa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

A protein preparation of hTRT and the polynuclectide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase
                                                                                                                                                                                                                                                                                                                                                                                                              Pure and recombinant human Telomerase Reverse Transcriptase and variants - are useful in the diagnosis, prognosis and treatment cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1334

    PT Pure and recombinant human Telomerase Reverse Transcriptase and its PT variants - are useful in the diagnosis, prognosis and treatment of PT cell proliferation conditions especially cancer and ageing PS Example 1; Fig 68; 387pp; English.

CC The present sequence represents a human telomerase reverse transcriptase CC (hTRT) DNA clone from the present invention. The present invention also describes the following methods: (A) determining whether a test compound CC is a modulator of hTRT, by detecting the change in hTRT recombinant CC protein or polynucleotide, on administration of the compound; (B) preparation of frecombinant telomerase by contacting a protein of CC the hTRT RNA or protein in a sample by binding a relevant probe to the CC sample and detecting the complex formed or in the case of RNA detection, CC amplifying the product with presence of hTRT in the sample; and (D) CC increasing the proliferation of a vertebrate cell by increasing hTRT CC expression; and (E) the use of an agent that causes an increase in cell cell vertebrate cell proliferation to create a medicament that inhibits CC ageing. A protein preparation of hTRT and the polynucleotide encoding the fact of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase call conditions that are associated with high telomerase conditions that are associated with high telomerase activity can be used in the manufacture of hTRT can also be used in the new call conditions that are associated with high telomerase call call the new call conditions that are associated with high telomerase call call the new call call the proliferation of hTRT can also be used in the new call call the polynucleotide encoding the call call the proliferation of hTRT can also be used in the new call call the polynucleotide encoding the call call the proliferation of the call call the polynucleotide encoding the call call the proliferation of the call call the new call call the proliferation of the call call th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                               PT Pure and recombinant human Telomerase Reverse Transcriptase and its PT variants - are useful in the diagnosis, prognosis and treatment of PT cell proliferation conditions especially cancer and ageing Example 1; Fig 74; 387pp; English.

CC The present sequence encodes human telomerase reverse transcriptase (hTRT), which is a ribonucleoprotein. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant CC protein or polynucleotide, on administration of the compound; (B) protein or polynucleotide, on administration of the compound; (B) preparation of hTRT with a telomerase by contacting a protein of the hTRT RNA or protein in a sample by binding a relevant probe to the Sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or increasing the proliferation of a vertebrate cell by increasing hTRT CC expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding the used to treat conditions that are associated with high telomerase activity can be used to treat conditions that are associated with high telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁

cc in a cell is used to increase telomerase activity and thus careful is used to increase telomerase activity and thus careful is used to increase telomerase activity and thus careful disorders, while expressing an inactive mutant of TP2 (or molecule antisense to the gene) is used to decrease telomerase cc activity, e.g. for treatment of cancer. TR2 polypeptides can also cc binding to TRIP1 (see W61347) or telomerase RNA, potentially useful therapeutically, also to raise specific antibodies useful cc in immunoassays and therapeutically as inhibitors. Nucleic acid cc fragments are used as diagnostic probes for detecting/quantifying cr pr DNA. Also contemplated are transgenic animals in which the TP2 gene has been inactivated or is overexpressed. TP2 polypeptides are administered i.v., s.c. or orally, or they are delivered from centineered cells or gene therapy vectors.

Example 5; Fig 7; 150pp; English.

Partial cDNA clone TP2-15 comprises the 3' region of human partial cDNA clone TP2-15 comprises the 3' region of human telomerase protein 2 (TP2) cDNA, 133 bases of which overlap with the 3' end of another partial clone, #32 (see V27872). It was isolated from a human colon tumour cell line LIM1863 cDNA library using an 830 bp XhoI fragment of clone #32 as probe. Clones TP2-15 and #32 have been combined to provide a full-length sequence (see Y27876) coding for human TP2 (see W61350). Expressing TP2 genes in a cell is used to increase the comprise activity and the sequence in a cell is used to increase the comprise activity.
                                                            12-OCT-1998 (first entry)

CT This full-length cDNA clone codes for a human telomerase protein C2 (TP2, see #61350), a novel protein of the telomerase complex. CC The sequence was deduced from overlapping partial clones #32 (see C2 (TP2), see Well350), which were obtained from a human colon tumour cell line LIM1863 cDNA. Expressing TP2 genes in a CC cell is used to increase telomerase activity and thus proliferation for treatment of e.g. HIV infection, AIDS and ageing disorders, while expressing an inactive mutant of TP2 (or molecule antisense to the gene) is used to decrease telomerase activity, e.g. for treatment of cancer. TR2 polypeptides can also be used to screen to the gene) is used to decrease telomerase activity, e.g. for treatment of cancer. TR2 polypeptides can also be used to screen for agents that inhibit TP2 activity or its binding to TRIP1 (see W61347) or telomerase RNA, potentially useful therapeutically, c.g. for also to raise specific antibodies useful in immunoassays and therapeutically as inhibitors. Nucleic acid fragments are used cas diagnostic probes for detecting/quantifying TP2 DNA. Also contemplated are transgenic animals in which the TP2 gene has been inactivated or is overexpressed. TP2 polypeptides are administered c.v., s.c. or orally, or they are delivered from engineered cells or gene therapy vectors.

such as cancer cells or transformed cells
Claim 5; Fig 5A-B; 96pp; English.
The present sequence encodes the catalytic subunit of a human
telomerase holoenzyme. Disruption of the telomerase gene alters
telomerase holoenzyme. Disruption of the telomerase activity,
and the protein is physically associated with telomerase and a
constituent of active telomerase complex. The products can be used
for increasing or reducing the lifespan of cells such as cancer cells
or transformed cells. They can also be used in the diagnosis and
treatment of mallynancies. In addition, cells with a longer lifespan
can be transplanted into or grafted onto an individual (e.g. as skin
grafts, as systems for delivery of therapeutic peroteins, such as hormones
and enzymes), to whom they provide therapeutic benefit.
